COAXIAL CABLE TERMINATION SYSTEM

ABSTRACT OF THE DISCLOSURE

A coaxial cable termination system for providing a reliable electrical connection of an end of a coaxial cable to an electrical device. An electrically conductive core body is cast over the core of the coaxial cable, and
5 an electrically conductive shield body is cast over the shield of the coaxial cable, wherein the core and shield bodies are electrically and mechanically connected to the coaxial cable, yet the core and shield bodies mutually have direct current electrical isolation with respect to each other. Each of the core and shield
10 bodies has respective attachment features for a particular application, such as for example connecting to a circuit board.
